Post event summary report

Date-13-9-2022

Name & Date of the event- Dr. D. Y. Patil college of pharmacy, Akurdi visit on 2/9/2022

Organising department/ committee- Agadtantra Department

Location of the event- Dr. D. Y. Patil college of pharmacy, Akurdi.

Number of persons attending the event- PG students – 8 and faculty- 2

Mode of event- Online/ Offline- Offline

Drive Link for Photos-

<https://drive.google.com/drive/folders/1z4XwBR4LlnkJ2iN0Gd7FwevaAqf-hr8?usp=sharing>

Brief summary of the event-

Agadtantra department had organized visit to Dr. D. Y. Patil college of pharmacy, Akurdi for PG students of our department on 2nd September 2022 at 2 PM. Pharmacology department and animal house were visited during this visit. Animal experiments play a very essential role in toxicology study. Keeping this in mind the visit was organized. Dr Smita Sadar madam guided us during the visit regarding various instruments and animal models used in research.

2. MARIJUANA AS "VISHA" AND ITS EFFECT ON INFERTILITY

* Dr. Geetika Yadav,

* PDEA College of Ayurveda and Research Centre, Pune.

From Ancient times Cannabis has been used for medicinal purposes and it has spiritual importance. In Ayurveda, it is mentioned that any drug taken in adequate quantity helps to cure the disease. In opposition to that, if taken incorrectly it will act as *Visha*. Marijuana is another preparation of *Cannabis Sativa* in the present scenario usually smoked in the form of cigarettes. To understand the role of Marijuana smoking as one of contributing factors that causes infertility this article has been prepared.

Methods:

The review was done using e-resources like PubMed, Google Scholar. Articles published were analysed and discussion was done.

Result:

Many people consider smoking marijuana is a way of relieving stress and many others consider it a fashion need. Young people intake marijuana for curiosity, peer pressure, and the desire to fit in with friends. Those who have already begun to smoke cigarettes or use alcohol or both are at increased risk for marijuana use as well. And people who have untreated mental health disorders (such as depression, anxiety, and conduct disorder) or who have experienced trauma are at increased risk of using marijuana and other drugs at an early age. Marijuana can lower fertility, reducing the potential to conceive. There exists a complex relationship between the endocannabinoids system and hormone system.

Discussion:

In males, smoking affects semen production & its qualities whereas in females it affects their fertility thus enabling them to conceive & if conceived resulting in premature delivery, low birth weight and long-term effects.

ABSTRACT

Antidotes are drugs designed to counteract toxins. They act by altering the chemical nature of the toxin, or by interfering with toxin binding to biologic sites; in either case, the antidote interferes with the toxin to reduce morbidity or mortality. Accidental or premeditated ingestion of poisons is a significant health problem worldwide and is a frequent cause of admission to emergency departments and intensive care units (ICUs). Reflecting the necessarily urgent nature of the clinical response to poisoning, however, the research and testing often does not involve human subjects for the “no harm principle.” Randomized controlled trials evaluating the effectiveness of methods often are lacking, and evidence based information on the management of poisoning is scarce. Clinical trials in toxicology are often hard to carry out: The framework conditions are hardly ever the same from one case of poisoning to another, and, as a result, the assessment of any particular intervention may be problematic.

KEYWORDS-*Poisoning, Importance Of Antidote, Pharmacokinetics, Toxicokinetics, Various Antidote*

INTRODUCTION

The Oxford Dictionaries are somewhat more specific, defining an antidote as “A medicine taken or given to counteract a particular poison.”¹

An antidote is a special pharmacologic or toxicologic antagonist that can alter favourably the toxic effects of a poison. Some antidotes are toxic and therefore should be used with caution.² Although some effective and well-tolerated antidotes are considered the ideal treatment of poisoning, such as acetylcysteine for paracetamol intoxications, dimethicone for surfactant ingestions, and fomepizole for poisoning with methanol or glycols. Fomepizole inhibits alcohol dehydrogenase³ and has replaced ethanol as an antidote with substantially higher toxicity. As a consequence of recent improvements in symptom oriented intensive care medicine, the use of certain antidotes that carry the risk of severe complications must be re-evaluated. The physician using such antidotes needs to have detailed knowledge of the substances used (e.g., antisera, chelators) and their clinical effects. A list of historical and current antidotes and their clinical uses can be found, for example on the GIZ-Nord website.

- Displacing the poison from a receptor or competing for the receptor
- Counteracting the toxic effect
- Enhancing detoxification

Because the term antidote is not clearly defined, there may be disagreement about whether a given therapeutic agent is an antidote or not; an agent is regarded as an antidote if it is specific for a certain poison or class of poisons.

Important facts to bear in mind about antidotes include the following:

- Administration of an antidote does not obviate the need for supportive and symptomatic treatment. On the contrary, supportive treatment may still mean the difference between survival and death.
- Poisonings for which there are antidotes are not necessarily less serious than those for which there is no antidote, and do not necessarily carry a better prognosis. If anything, the opposite is true; antidotes have been developed for some poisons because those poisons carry a particularly high mortality rate.
- A number of antidotes are toxic in their own right and may cause serious toxicosis if or if the antidote is given for too long a course. For example, atropine in the absence of anticholinesterase poisoning can cause life-threatening atropine poisoning, and the course of calcium disodium EDTA in lead poisoning must be limited because of the toxicity of the antidote.

POISONS FOR WHICH THERE ARE SPECIFIC ANTIDOTES⁴

Poison	Antidote	Dose and Comments
Anticholinergic drugs (atropine, hyoscamine, scopolamine, etc.)	Physostigmine	1-2 mg given IM or 0.02 mg/kg IV, with the patient being observed for 30 minutes
Arsenic	Dimercaptosuccinic acid (succimer), 2-3-dimercapto-1-propanesulfonate, or meso-2,3-dimercaptosuccinic acid OR Dimercaprol	Succimer: 10 mg/kg PO, three times daily for 10 days OR Dimercaprol: 3-6 mg/kg IM, 3 to 4 times daily, or 2-5 mg/kg IM every 4 h for 2 days, then every 8 h for 1 day, and every 12 h thereafter
β-Sympathetic blocking agents	Insulin OR amrinone	Insulin IV OR amrinone as 4 mg/kg bolus
Benzodiazepines	Flumazenil	0.1 mg/kg IV
Calcium channel blocking agents	Calcium	IV calcium gluconate or calcium chloride, 10% solution in saline
Carbamate insecticides	Atropine OR glycopyrrolate	Atropine 0.25 to 0.5 mg/kg BW. Give 1/4 of dose immediately, IV if possible. Remainder is administered IM or SC if a response is seen to the IV bolus OR Glycopyrrolate 0.5 mg/kg IM or SC
Carbon monoxide	Oxygen (pure or with not more than 5% CO ₂)	By mask
Cholecalciferol	Pamidronate sodium (or other bisphosphonate as available)	Pamidronate sodium: slow (2-4 h) intravenous infusion in saline, at 1.3-2 mg pamidronate sodium/kg BW

Poison	Antidote	Dose and Comments
Copper	Ammonium tetrathiomolybdate OR d-Penicillamine	Ammonium tetrathiomolybdate, 1.7–3.4 mg/day IV or SC, for three treatments on alternate days OR d-Penicillamine, 50 mg/kg orally for up to 6 days
Cyanide, HCN orally or by inhalation	Sodium nitrite followed by sodium thiosulfate OR Hydroxocobalamin Sodium thiosulfate may be used alone in mild toxicosis	Sodium nitrite IV, 16–22 mg/kg, as a 3% solution followed by IV sodium thiosulfate, 1.65 mL of a 25% solution. Treatment may be repeated at half the initial doses after 30 min OR Hydroxocobalamin: Human dose is one 2.5 g ampoule with 100 mL of 0.9% saline, administered IV over 15 min, followed by a second ampoule in the same volume over the same time. This is sufficient to bind 100 mg of cyanide. The recommended dose rate in acute cyanide poisoning in dogs is 79 mg/kg
Cyanogenic glycosides	Sodium nitrite + sodium thiosulfate OR Methylene blue	10–20 mg/kg sodium nitrite administered IV as 20% solution, up to 600 mg/kg of sodium thiosulfate as 20% solution Methylene blue, IV, at 9–22 mg/kg. Do not use both sodium nitrite and methylene blue Methylene blue is a cost-effective treatment of cyanogenic glycoside poisoning in large herbivores
Digitalis and analogs	Digibind	Digibind (digoxin-specific antibody)
Heparin	Protamine sulfate	1% protamine sulfate by slow IV push. This drug will antagonize heparin at a 1:1 ratio by mass
Iron	Deferoxamine	Deferoxamine IV at 15 mg/kg/h, or at 40 mg/kg every 4–6 h
Lead	Calcium disodium EDTA OR Calcium disodium EDTA + dimercaprol OR Meso-2,3-dimercaptosuccinic acid (Succimer) OR d-Penicillamine	Ca disodium EDTA: details by species are beyond the scope of this table. See entry for lead WITH/WITHOUT Dimercaprol: 3–6 mg/kg IM, 3 to 4 times daily, or 2–5 mg/kg IM every 4 h for 2 days, then every 8 h for one day, and every 12 h thereafter OR Succimer: 10 mg/kg PO, three times daily for 10 days OR d-Penicillamine—dogs: 30–110 mg/kg/days PO, divided into four doses. Treatment should be suspended after 5–7 days and then resumed after a further 5–7 days. d-Penicillamine and Ca-EDTA can be cycled Cats: d-penicillamine PO 125 mg/cat every 12 h for 5 days Cage birds: d-penicillamine 55 mg/kg PO every 12 h, for up to 2 weeks before giving a 5 day rest

Poison	Antidote	Dose and Comments
Mercury	d-Penicillamine OR Succimer	See entry for lead, above
Nitrates	Methylene blue	4-30MG/KG IV of a 1% Solution
Opioids	Naloxone	0.01–0.02 mg/kg IV, IM or SC
Organophosphate insecticides	Atropine OR glycopyrrolate AND Pralidoxime (2-PAM) chloride	Atropine or glycopyrrolate, see carbamate toxicity, above 2-PAM chloride 20 mg/kg IM, twice daily
Para-aminopropiophenone	Methylene blue	Dogs: 4–22 mg/kg as a 1% solution, by slow IV infusion Cats: use with caution, starting at 4 mg/kg, administer as for dogs
Paracetamol	N-acetylcysteine	Orally or intravenously at a dose of 140 mg/kg, followed by doses of 70 mg/kg every 6 h for five to seven treatments. <i>N</i> -acetylcysteine should be If <i>N</i> -acetyl cysteine is not available, administer S-adenosylmethionine. The suggested treatment regime for dogs is 40 mg/kg orally, followed by 20 mg/kg every 24 h for 9 days, while a tentative regime for cats is 180 mg orally, every 12 h for 3 days, followed by 90 mg orally every 12 h for 14 days Another treatment regime is sodium sulfate at 50 mg/kg IV, every 4 h for six treatments, in a 1.6% solution
Parasympathomimetic drugs, e.g., physostigmine, pilocarpine		Atropine, as for organophosphate insecticides (see above) 2-PAM is only useful for echothiophate
Quinidine	Sodium bicarbonate	IV sodium bicarbonate
Sodium nitrite	Methylene blue	Dogs: 4–22 mg/kg as a 1% solution.
Tropane alkaloids	Physostigmine	0.6 mg/kg IV
Zinc	Ca-EDTA OR d-Penicillamine	

Specific Treatment (Administration of Antidotes)

An antidote to poisons may be chemical, pharmacological, or physiological in nature. These counteract or neutralize the effect of a poison. Despite popular misconceptions, antidotes are available for only a small number of poisons. Actions of antidotes can be classified according to the mode of action. Different mechanisms of action with their specific antidotes are summarized in Table

Common Antidotes Based on the Mode/Mechanism of Action⁵

Toxin	Antidote
Acetaminophen	N-acetylcystein
Benzodiazepines	Flumazenil
Blockers	Glucagon
Ca channel blockers	Ca, intravenous (IV) insulin at high doses with IV glucose
Organophosphates and (cholinesterase inhibitors)	Pralidoxine, physostigmine
Carbamates	Atropine and protopam
Heparin	Protamine
Ethylene glycol	Ethanol fomepizole
Tricyclic antidepressants	NaHCO ₃
Isoniazide	Pyridoxine (vitamin B ₆)
Digitalis glycosides (digoxin, digitoxin, oleander, fox glove)	Steroid-binding resins, potassium salts, beta adrenergic blocking agents, procaine amide
Formaldehyde	Ammonia (by mouth)
Cyanide	Methemoglobin (formed by nitrite administration), thiocyanide
Botulinum	Botulinus antitoxin, guanidine
Methyl alcohol	Ethanol
Selenocysthionine	Cystine
Fluoroacetate	Acetate, monoacetin

Toxin	Antidote
Bromide	Chloride
Strontium, radium	Calcium salts
Neuromuscular blocking agents (eg, curare)	Neostigmine, edrophonium
Morphine and other related narcotics (opioids)	Naloxone and others
Coumarin anticoagulants	Vitamin K
Thallium	Potassium salts
Amino acid analogs	Amino acids
Carbon monoxide	Oxygen
Cyclopropane	Alpha adrenergic blocking agents (ie, haloalkylamine), antihistamines
Histamine	Antihistamines
Agents that produce methemoglobinemia (eg, aniline dyes, some local anesthetics, nitrites, nitrates, pheacetin, sulfonamides)	Methylene blue
Antitumor agents such as methotrexate and other folic acid antagonists	Glycine
5-Fluorouracil	Thymidine
6-Mercaptopurine	Purines

Consider specific antidotes⁶

Specific antidotes are available to treat poisoning by certain classes of compounds. Antidotes may be useful in preventing the absorption of ingested agents (e.g., Ca^{++} salts for F^-), increasing their rate of elimination (e.g., dimercaprol for inorganic mercury), blocking specific receptors (e.g., naloxone for morphine), or blocking other toxic activity (e.g., N-acetyl cysteine for acetaminophen overdose). One specific antidote should be remembered by dentists. For ingestion of toxic amounts of fluoride, which might occur with prescribed tablets or with topical liquids or gels, the local antidote to prevent absorption is Ca^{++} (in milk, calcium lactate, calcium gluconate, or lime water). If necessary, 2 to 10 mL of 10% calcium gluconate may be injected intravenously to bind fluoride and overcome hypocalcemia. Dentists who use benzodiazepines and opioid analgesics for conscious sedation must be familiar with the use of flumazenil and naloxone, respectively, to reverse respiratory depression caused by these drugs.

DISCUSSION

Antidote administration is appropriate when there is a poisoning for which an antidote exists, when the actual or predicted severity of the poisoning warrants its use, when expected benefits of therapy outweigh its associated risk, and when there are no contraindications. Antidotes dramatically reduce morbidity and mortality in certain intoxications, but they are unavailable for most toxic agents. Antidotes may reverse or reduce poisonous effects by a variety of means. They may prevent absorption, bind and neutralize poisons directly, antagonize end organ effects, or inhibit conversion to more toxic metabolites. The pharmacokinetics of the intoxicant and the antidote must be considered because toxidromes may recur if the antidote is metabolized more rapidly than the ingested substance, especially if the antidote acts by antagonizing end-organ effects or by inhibiting the conversion to toxic metabolites. In certain situations, it may be necessary to repeat administration of antidotes or provide for continuous infusion. Although a response to empirically administered antidotes can be used to confirm a suspected diagnosis, their indiscriminate use can potentially increase patient morbidity. The administration of flumazenil to comatose patients with suspected benzodiazepine overdose can precipitate seizures and worsen the clinical course if tricyclic antidepressants have been co-ingested.

CONCLUSION

Antidotes are drugs designed to counteract toxins. They act by altering the chemical nature of the toxin, or by interfering with toxin binding to biologic sites; in either case, the antidote interferes with the toxin to reduce morbidity or mortality.

Lectures:

No of Theory Classes – at least 240 hours during the whole course -1class daily of 1 hour duration

No of Practical / Clinics - at least 720 hours during the whole course -1practical daily of 3hour duration

Vacations: As per University norms

Number of Teachers required for the Course: For 25 Students

- 1) 1 Professor
- 2) 1 Reader
- 3) 1 Lecturer

Guest lecture from Modern Medicine-Faculties and . the expert practitioners .

Paramedical and non-teaching Staff required: The Centre must fulfil, the norms prescribed by C.C.I.M.Delhi.

Sr. no	Staff	Required
1.	OT Sister	1
2.	OT Assistant	1
3.	Nursing staff	4
4.	Lab Technician	2
5.	Lab Assistant	1
6.	Clerk with Computer Operator	1
7.	X- ray Technician	1
8.	Ward Boy (1- Male & 1- Female)	2
9.	Aaya	3
10.	Sweeper	3
11.	peon	3

Infrastructure: The Centre must fulfil, the norms prescribed by C.C.I.M.Delhi.

Sr. no.	Type of Infrastructure	Area (sq.feet) required
1.	Building	
	OPD	200
	IPD	600
	OT	200
2.	Classrooms (One for 20 Students)	100
3.	Library	500
4.	Laboratory	200
5.	Museum	200
6.	Rest Room, Recreation, etc.	250
7.	Sterilisation room	
8.	Washing room	
9.	Ksharsutra Prepration room	

Equipment & Intruments:

Sr. no.	Type of Equipment & Intruments	Requirement
1.	Ksharsutra cabinet	1
2.	Ksharsutr atable	2
3.	Artery forcep straight	12
4.	Artery Forcep curved	12
5.	Allies Forcep	12
6.	B.P. Handle no.3	6
7.	B.P. Handle no.4	6
8.	Babcock Forcep	12
9.	Chittel Forcep	3
10.	Fistula Probe	2 set of 6
11.	Proctoscope	2 set(Rigid and Plastic)
12.	Mosquito Forcep Straight	12
13.	Mosquito Forcep curved	12
14.	Needle Holding Forcep	6
15.	Tooth Forcep	6
16.	Scissor- Medium size	3
17.	Scissor- Small size	3
18.	Scissor-moist	3
19.	Scissor-stich cutting	3
20.	Scissor-dressing	3
21.	Suction Cannula	1 set
22.	Towel Clip	12
23.	Glove Bag-Cloth	12
24.	Hole Towel	12
25.	Mask and cap-cloth	12 set
26.	Operation Sheet	25

27.	Operation Gown	12
28.	Drums-different size	9
29.	Light Source (Cold –Spot light)	2
30.	Anal Retractor	3 sets
31.	Curator-diffrent sizes	6
32.	Plain Forcep	6
33.	Sponge Holder	12
34.	Pile Mass Holding Forcep	12
35.	Leg rest	12
36.	O.T.Table	01

Equipment in OT:

Sr. no.	Equipment	Required
1.	Boyles Apparatus	1
2.	Steriliser	2
3.	Autoclave Machine	1
4.	Pulse Oxy-meter	1
5.	Cardiac Monitor	1
6.	B.P. Apparatus	1
7.	Stethoscope	2
8.	Ceiling ark lamp	1
9.	O ₂ Cylinder-complete set	03
10.	O ₂ Cylinder Stand	2
12.	Cautery Machine/ Diathermy Machine	2
13.	Operation table	2
14.	Operation trolley	2
15.	Meyos trolley	2
16.	Ambu Bag	1
17.	Suction Machine	1
18.	Laryngoscope set	1
19.	X-ray View Box	1
20.	Oxygen Rubber Mask	2
21.	Endo-tracheal Tube (Rubber)	20
22.	Generator for O.T.	1
23.	Fumigator	1
24.	Air conditioner	1
25.	Stretcher with Trolley	2
26.	Rubber band	2 set
27.	Video Endoscope(Desirable)	1 set
28.	I.R.C. (Desirable)	1
29.	Sphrinctometer(Desirable)	1
30.	Different Needles	3 sets
31.	Different Surgical Barbour linen	1 set
32.	All types of Stitches Material	1 set each

Syllabus:

- 1) Basic concepts of Ayurveda i.e. Dosh, Dhatu, Mala
- 2) History of Shalya tantra & Ksharsutra
- 3) Significance of Shalya tantra in Astanga Ayurved.
- 4) Ayurvedic aspect of Anatomy and physiology of Anal canal (Rachana and Kriya Sharir of Guda)
- 5) Applied Anatomy of rectum and anal canal and dissection
- 6) Applied Physiology of rectum and anal canal.
- 7) Congenital anomalies of rectum and anal canal i.e. imperforate Anus.
- 8) Concepts of Kshar.
- 9) Preparation of Kshar eg. Apamarga Kshar, Yavkshar etc.
- 10) Technique of Ksheer collection of various plants
- 11) Preparation of various kshar sutra, Ksheersutra
- 12) Standardization of Ksharsutra (Ph Guage, Sterilisation, packing)
- 13) Preparation of Kshar varti.
- 14) Mechanism of action of Ksharsutra.
- 15) Instruments required for Kshar sutra preparation and application.
- 16) Description of Ksharsutra Cabinet.
- 17) Common sign and symptoms of Ano-rectal diseases.
